

# Fibregenix™

## WHY AND WHEN TO USE A CALMER

Life can be stressful for your horse. Find out how using an effective calmer can be the answer for both of you!

Love 'em or hate 'em, it's a fact that despite your best efforts with training, most horse owners have encountered a situation where they need a bit of extra help to keep their horse calm. Whether it's for a big competition or the annual vet visit, you want to keep your horse as settled as possible. Owners are often unsure of when to use a liquid or calmer paste - so here are some common scenarios....

**1** Before travelling. Travelling can be a stressful time for your horse. Administering the recommended measure of a Fibregenix calmer paste one hour prior to travelling can help keep your horse settled throughout his journey.

**2** Before a competition. Give the recommended measure of calmer paste one hour prior to competition. A top-up measure can be given again 30 minutes prior to competing

**3** Before a trail ride. Trail riding can be a stressful time for horses as they enter a new environment. Keeping your horse calm during a trail ride is important for your horse's safety and also ensures an enjoyable experience for both you and your horse.

**4** Before the vet, dentist or farrier. If your horse is tense or uncooperative, it can often interfere with the vet or farrier's work. Providing 15ml of calmer paste one hour prior to their arrival can help to relax your horse keeping them more settled. A Fibregenix calmer paste can be safely used in addition to your daily liquid calmer if required.

### Top tip:

For the best results, administer calmer while your horse is still calm and not after he's already excited

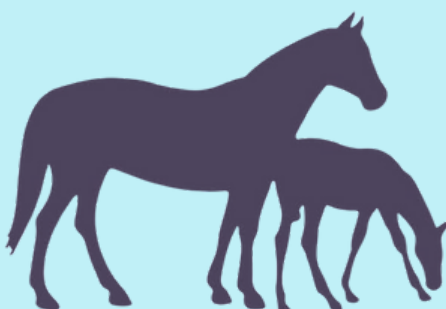

### **5** Training at home

If your horse is spooky or inattentive even on his home territory, help him with our Liquid Karma. The only one of its kind, this revolutionary product can be added daily into feed. Non-drowsy-making, natural ingredients and proven to be effective!

### Weaning time!

**6** Karma is completely safe to use daily or as a single dose when required and has a palatable flavour derived from natural liquorice. You can give it to both pregnant or lactating mares, when it can prove invaluable during the stressful time of weaning to both mare and foal.

**Ingredient: Magnesium Chloride, L-Tryptophan, Vitamins B1, B3 and E.**
