

## WHY FIBREGENIX?

You want your horse to be the best he can be. But trying to help improve his digestion or his coat or hooves or performance, can mean a considerable outlay bumping up your weekly or monthly budget. You may have done some reading and become increasingly confused by the endless terminology and the huge variety of feeds and supplements available. Well, there are plenty of great reasons why a Fibregenix balancer can be the solution to your horse's nutrition problems as well as saving you dollars - here are our Top 5!

### #1 Learn what works for your horse

We all know that every horse should be treated as an individual. A great start is to get a proper diet review, so if you're looking to overhaul his diet click [HERE](#). From the info you provide we'll go over your horse's individual requirements, his history, current issues and suggestions on how best to fix them and more. We'll tailor it not just for his needs but also make sure it will suit yours too.

### #2 Improve your horse's digestive efficiency

Everything begins with gut health. Horses evolved to have simple fibre diets and we believe in keeping things simple as nature intended. Feeding Fibregenix will help you do just that. By improving how your horse digests his fibre/forage and enabling his nutrients to be digested more efficiently, you can keep his diet more natural. This in turn reduces the risk of digestive upsets such as ulcers, colic, compromised immune system and metabolic problems.

### #3 Minimises financial Outlay

By consolidating your supplements into one functional product you'll avoid over-supplementing, resulting in a more cost-effective diet long term. For around \$2.60 or less, you'll get peace of mind knowing all your horse's nutrient needs are being met. Feeding lots of individual supplements makes far less financial sense. Most horses in light/moderate work can do very well on a fibre plus balancer diet. This is ultimately healthier - and the healthier your horse is, the less likely he'll need to see the vet.

### #4 Reduce feed wastage

The ingredients in your horse's diet must be easily absorbed and fully utilised AND be palatable, otherwise not only will your horse potentially turn his nose up at his feed bucket, but your dollars could be lying on the ground in a very expensive pile of manure! Fibregenix customers tell us how their horses eat every scrap. The nutrients are highly bioavailable and the low feeding rate (100g/100kg of bodyweight) doesn't over-burden the digestive system leaving more room for that precious forage.

### #5 Superior Function

Our formulations are free from whole cereals and molasses – which means the overall NSC of the balancers falls below 12% – perfect for grain intolerant or metabolic horses. The nutrient specification of each balancer means they suit a wide variety of horses when additional calories aren't needed. Fibregenix helps improve condition and topline, hooves, coat and skin, respiratory, stamina, recovery from illness/injury, immunity, temperament and more.
